

Digital Media – Free to use multimedia resources

If you use a search engine to find multimedia resources, it is likely that the results returned will be copyrighted material. In this task you will explore a series of websites that provide access to multimedia resources which you can use freely in your work.

It is important that you observe which type of licence is applicable to each resource, as some may be more restricted than others. Stipulations may include attribution, no editing of the material or commercial use.

As you visit each of these websites, read their licence type(s) information and explore their content.
